

EMBRACING THE IMMATERIAL UNIVERSE

- For centuries the human being has built his culture and his development based on classical sciences as physics, maths, chemistry or biology.
- Today those sciences are turning towards the noetic vision based on the evolutionary view from the integration of the material and immaterial world.
- That is the reason why arises studies of quantum physics and mechanics ; or the study of the energy that surrounds the electromagnetic field of our body.
- These new looks explain that each one of us have immaterial information that manifests itself in reality, such as the energy of the aura or of the electromagnetic waves of our feelings; there was not notion of all that before.
- The evolution of the humann bein depends today on the integration of the material with the immaterial, that would allow the integration of the total consciousness, where we are all connected with our environment and with the others.
- That consciousness will help us to develop more empathy and connection among us as humanity and with that we will help the planet in its evolution and care....this knowledge is a great opportunity.
